#Read in and collate all the files in the Processed Data folder

```
files <- list.files(path = "Processed Data", pattern = "\\*.csv$", full.names = TRUE)
```

```
data_list <- lapply(files, function(f) {  
  df <- read.csv(f, stringsAsFactors = FALSE) # avoids factors  
  df$Site <- as.character(df$Site) # ensures character  
  return(df)  
})
```

Combine all files

```
all_data <- bind_rows(data_list)
```

#remove the first unneeded column

```
all_data <- all_data[, -which(names(all_data) == "X")]
```

THIS IS ONLY FOR 2023 when SWAMP was called UP and UPLAND was called UPCON

##In 2023 SWAMP was called UP and UPLAND was called UPCON

```

```

      Site == "SWH" & Zone == "UP" ~ "SWAMP",  
      Site == "SWH" & is.na(Zone) ~ "UP",

    )  
  )
```

##Make all Sample IDs formatted the same

```

TRUE ~ paste0(Site, "_", Year, Month, "_", Zone, "_", Replicate) # keep everything else unchanged
))

```

##Collate the data
